AAB88419. Included in the invention are primers AAF9317 - AAF89429 and AAB88419. Included in the invention are primers AAF9317 - AAF894295 and AAF82223 - AAF82232 which are used to isolate the cDNA sequences of the invention. The invention also includes methods for the production of antibodies directed against the proteins, and cDNA sequences, which can be used in vaccines. The polynucleotide sequences can be used in gene therapy. The polynucleotide sequences and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate secretory protein/membrane protein expression. The nucleic acids and complementary sequences may also be used as DNA probes in diagnostic assays (e.g. polymerase chain reactions (PCR)) to detect and quantitate the presence of similar nucleic acid sequences in samples.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                They may also be used to study the expression and function of secretory proteins/membrane polypeptides and their role in metabolism. The polypeptides may be used as antigens in the production of antibodies against them and in assays to identify medulators (agonists and antagonists) of expression and activity. The antibodies and antagonists may also be used as therapeutic agents to down regulate expression and activity. The antibodies may also be used as diagnostic agents for detecting the presence of the polypeptides in samples (e.g. by enzyme linked immunosorbant assay (BLISA). Examples of diseases which may be treated include rheumatoid arthritis and diabetes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ProGluIleIleThrThrLysAspProIlePheAsnThrGluThrAlaThrGluThrThr

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an isolated cDNA encoding a protein that is differentially expressed in breast cancer, designated PDEBC. The invention is useful to diagnose breast cancer. The invention is also useful to stage, treat, and monitor progression or treatment of breast cancer, particularly an invasive, metastatic stage of the disease. The present sequence represents cDNA encoding human PDEBC incyte 3044710CB1. Note: There are two sequences that have been assigned SEQ ID 2 in the specification, the present sequence represents the sequence given in

thuman signal peptide-containing proteins HSPP-1 to HSPP-144. HSPPs have anticancer, anti-inflammatory, antimicrobial, nootropic, hepatotropic, cardiovascular and antiaschmatic activities, and can be used in gene therapy. HSPPs can be used to treat or prevent disorders associated with decreased activity or function of HSPP. Antagonists of HSPP associated with increased activity or function of HSPP. Such diseases include cell proliferation activity or function of HSPP. Such diseases include cell proliferation (including cancer), inflammation, cardiovascular, neurological, caproductive or developmental disorders, (e.g. arteriosclerosis, circhosis, psoriasis, acquired immune deficiency syndrome, anaemia, crhom's disease, microbial or other infections, congestive or ischaemic heart disease, Alzheimer's, Parkinson's or Huntington's circhosis, cands can be used for the recombinant production of HSPP, for detecting HSPP in standard hybridisation and amplification assays (for detecting HSPP in standard hybridisation and amplification assays and for chromosomal mapping. HSPP are also used to raise corribozyme therapeutics, for detecting related sequences or genetic variations, and for chromosomal mapping. HSPP are also used to raise (potential therapeutic agents). Ab are used to diagnose, or monitor, HSPP related diseases (in usual immunoassays), as therapeutic antagonists, in competitive drug screens, and for purification of HSPP from naturals.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated cDNA encoding a protein that is differentially expressed in breast cancer, designated PDEBC. The invention is useful to diagnose breast cancer. The invention is also useful to stage, treat, and monitor progression or treatment of breast cancer, particularly an invasive, metastatic stage of the disease. The present sequence represents cDNA encoding human PDEBC Incyte 3044710CB1. Note: There are two sequences that have been assogned SEQ ID 2 in the sequence listing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       BP; 612 A; 463 C; 445 G; 509 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              2029

AAX52213-74 encode secreted and transmembrane human proteins, and are obtained from cDNA libraries prepared from fetal lung, fetal kidney, tetal brain, fatal luver and fetal retina. The encoded polypeptides have specific uses based on their homology to known polypeptides, e.g. PR021 and PR0217 can be used for disorders associated with the preservation and maintenance of gastrointestinal mucosa and the repair of acute and chronic mucosal lesions (e.g. enterocolitis, Zollinger-Ellison syndrome, gastrointestinal ulceration and congenital microvillus arrophy), skin diseases associated with abnormal Reratinocyte differentiation (e.g. psoriasis, epithelial cancers such as lung squamous cell carcinoma of twilva and gliomas), potent effects on cell growth and development, diseases related to growth or survival of nerve cells including PR0265 can be used as for fibromodulin, e.g. for reducing dermal scarring. PR0264 can be used as a target for anti-tumor drugs. PR0533 may be used as an anti-thrombotic agent; PR0287 polypeptides and portions may be used for treating problems of the kidney, uterus, endometrium, can be used for treating problems of the kidney, uterus, endometrium, blood vessels, or related tissue, e.g. in the heart of genital tract
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SerPheGluThrCysSerTyrGlyTrpValGlyAspGlyPheValValIleSerArgIle 100

Sixty one nucleic acids encoding PRO polypeptides which are useful in the treatment of skin diseases (e.g. psoriasis), cancers (e.g. lung squamous cell carcinoma) and neurodegenerative diseases (e.g. Alzheimer's
                                                                                                                                                                                                                                                          The present sequence is one of sixty one nucleic acids encoding novel secreted and transmembrane PRO polypeptides. The PRO polypeptides are useful for treating skin, diseases (e.g. psoriasis), cancers (e.g. lung squamous cell carcinoma, gastrointestinal disorders (e.g. lung enterocolitis), neurodegenerative diseases (e.g. Alzheimer's disease, Parkinson's disease), wound repair, cardiovascular disorders (e.g. endometrial bleeding angiogenesis, ischaemias such as coronary ischaemia, atherosclerosis), inflammatory disorders (e.g. asthma, rheumatoid arthritis, multiple sclerosis), infertility, AIDS and diabetes and retinal disorders such as retinitis pigmentosum. The PRO nucleic acids

Eighty four nucleic acids encoding PRO polypeptides, useful in molecular biology, including use as hybridization probes, and in chromosome and
                                                                                                                                                                           The present sequence is the coding sequence for a human PRO polypeptide (secreted and transmembrane). The PRO protein, and PRO agonists, PRO antagonists or anti-PRO antibodies are useful for preparation of a medicament useful in the treatment of a condition which is responsive to the PRO protein, agonists, antagonists or anti-PRO antibodies. The PRO protein may also be employed as molecular weight markers for protein electrophoresis. The PRO coding sequence has applications in molecular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      MetAlaArgCysPheSerLeuValLeuLeuLeuThrSerIleTrpThrThrArgLeuLeu

Claim 2; Fig 5; 399pp; English.

C The invention relates to an isolated secreted and transmembrane PRO CC Polypeptide having 80 % sequence identity to a sequence appearing as CC Polypeptide having 80 % sequence identity to a sequence of an RBG9581-ABG95834 or their associated signal peptide, or a sequence of an

custing its associated signal peptides. Also included are the nucleic acids encoding the proteins, vectors, host cells, fusion proteins and antibodies which specifically bind to the proteins. The proteins are nutibodies which specifically bind to the proteins. The proteins are useful for detecting, polypeptide designated as A, B, C or D in a sample subspected of containing an A, B, C or D polypeptide, by contacting the sample which a polypeptide designated as B, F, G, H or I (or vice versa) and determining the formation of a A/E, B/F, B/G, C/H or D/I polypeptide conjugate in the sample, where the formation of the conjugate is the sample, where the formation of the conjugate is the sample, where the formation of the conjugate is a RR010272 polypeptide, B is a RR02010 polypeptide, C is a RR010376 polypeptide, B is a RR02010 polypeptide, C is a RR01096 polypeptide, D is a RR019976 polypeptide, The sample conjugate in the sample of the conjugate in the sample where the formation of the conjugate is a RR019976 polypeptide, C is a RR019976 polypeptide, The Signal State of the C is a cell suspected of expressing the A, B, C or D polypeptide, The E, F, G, H or I polypeptide is labeled with a detectable label or is attached to a cell expressing a polypeptide designated as A, B, C or D or E, F, G, H, or I The broactive molecule is a toxin, a radiolabel or an antibody. The broactive molecule causes death of the cell. A, B, C, D, E, F, G, H, or I The broactive molecule is a toxin, a radiolabel or an antibody c activity of a cell expressing a polypeptide designated as A, B, C or D or E, F, G, H, or I The treatment of a condition which is responsive to the custivity of a cell expressing a polypeptide designated as A, B, C or D or E, F, G, H, or I The antipodies against them are useful for moterial and subject of the proteins are useful as therepeutic agents for treating sponsive to the proteins, are useful as the protein and plan and plan and gene are useful as a useful and eventual and soreening of therapeutic neared and ev extracellular domain of the proteins with their associated signal or lacking its associated signal peptide. Also included are the macids encoding the proteins invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ABL88072 to ABL88258 encode the PRO proteins given in ABB84817 to ABB85003. The PRO proteins and polynucleotides have cardiant, cytostatic, antiangiogenic, hypotensive, vulnerary and antiarteriosclerotic activities, and can be used in gene therapy. The PRO polynucleotides, proteins, agonists and antagonists are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder in a mammal, e.g. cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restenosis, rheumatoid arthritis, angiogenesis (such as breast cardinoma and liver cardinoma) and wound healing. The PRO polynucleotides have applications in molecular biology, including use an hybridisation probes, and in chromosome and gene mapping. ABL88252 to ABL88267 represent primers and probes used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 One hundred and eighty seven nucleic acids encoding PRO polypeptides, useful in diagnosis and treatment of cardiovascular (e.g. myocardial infarction), endothelial or angiogenic disorders in a mammal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Paoni NF;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              errara N, Gerber H, Gerritsen ME, Goddard A;

   The present invention provides the protein and coding sequences of human PRO proteins. These are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder, including cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restenosis, rheumatoid arthritis, angina, mycardial infarctions, thrombophlebitis, lymphangitis, tumour angiogenesis (such as breast carcinoma and liver carcinoma) and wound healing. The present sequence is a coding sequence of the invention

   The invention relates to human PRO polypeptides (secreted or transmembrane polypeptides) and the polymucleotides encoding them. The PRO polypeptides and polynucleotides can be used in treating pathological disorders and tumours, in therapeutic treatment of cardiac insufficiency disorders and in therapeutic treatment of disorders involving protein secretion by the pancreas, including diabetes. They can also be used in treating disorders associated with the preservation and maintenance of gastrointestinal mucosa and the repair of acute and chronic mucosal lesions, and skin diseases associated with abnormal keratinocyte differentiation (e.g., psoriases, epithelial cancers such as lung squamous cell carcinoma, epidermoid carcinoma of the vulva and gliomas). The sequences can be used as molecular markers for protein binding electrophoresis purposes and can be utilised in protein-protein binding massays, biochemical screening assays, immunoassays and cell-based assays.

   The present invention relates to the isolation of novel human secreted sequences encoding them. The polypucledide sequences are useful in molecular biology, as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and DNA, and in gene therapy. The polynucleotide sequences may also be used in preparing PRO polypeptides by recombinant techniques, and in generating either transgenic animals of knock-out animals which, in turn, are useful in the development and screening of therapeutically useful reagents. The PRO polypeptides or their antibodies are useful in preparing a medicament for treating a condition responsive to the polypeptide or antibody, such as cancer. Alzheimer's disease or ischaemia, and in various disgnostic assays. The present sequence encodes a human PRO polypeptide of the invention

The invention relates to an isolated nucleic acid with at least 80% nucleic acid sequence identity to a nucleotide sequence encoding one of 61 secreted/transmembrane polypeptides, or PRO polypeptides or encoding
  New transmembrane polypeptides and nucleic acids encoding the polypeptides, useful in gene therapy, in chromosome identification, chromosome markers, in generating probes and in tissue typing.

as

the PRO protein extracellular domain. Also included are a vector comprising the PRO nucleic acid, a host cell comprising the vector, producing a PRO polypeptide (by culturing the host cell for the expression of the PRO polypeptide, and recovering the PRO polypeptide from the cell culture), an isolated PRO polypeptide (having at least 80% sequence identity to: (2 a namino acid sequence selected from the 61 PRO proteins; (D) an amino acid sequence encoded by a nucleic and molecule deposited with an ATCC number (detailed in the specification); or (c) an extracellular domain of a PRO polypeptide or to a PRO polypeptide of fused to a certain an extracellular domain of peptide), a chimaeric molecule comprising a PRO polypeptide of fused to a checklogous amino acid sequence, an anti-PRO antibody, detecting a pro245 or PRO1868 in a sample suspected of containing the polypeptide, Inking a bloactive molecule to a cell expressing a PRO245 or PRO1868. Nucleic acids which encode PRO can be used to generate either transgent animals or knock-out animals which may be used in the molecule. development and screening of therapeutically useful reagents. The nucleic acids may also be used in gene therapy, in chromosome identification, as chromosome markers, or in generating probes. The PRO polypeptides are useful as molecular markers for protein electrophoresis, and the isolated nucleic acids may be used for recombinantly expressing those markers. The PRO polypeptides and nucleic acids may also be used in tissue typing. Anti-PRO antibodies are useful in diagnostic assays for PRO, and in affinity purification of PRO from recombinant cell culture or natural sources. The present sequence encodes a PRO protein

à В à

The invention describes a new isolated nucleic acid molecule comprising
the full length coding sequence of the DNA deposited with the American
the full length coding sequence of the DNA deposited with the American
conviction (e.g. ATCC Deposit No. 209258), or a sequence
with at least 80% identity to a DNA encoding a PRO polypeptide comprising
any of 61 sequences having 164-119 amino acids fully defined in the
specification. The PRO polypeptides or polynucleotides are useful as
particularly useful for detecting or treating e.g. Parkinson's disease,
contricularly useful for detecting or treating e.g. Parkinson's disease,
Alzheimer's disease, inflammations, nephritis, wound healing, nerve
conterly, haemorrhage (or reduce risk for hemorrhage), rheumatoid
cancer), haemorrhage (or reduce risk for hemorrhage), rheumatoid
carcer), haemorrhage (or reduce risk for hemorrhage), rheumatoid
carcer), haemorrhage (or reduce risk for hemorrhage), rheumatoid
conternis, diabetes, cirrhosis of the liver, fibrosis of the lungs,
crestenosis, dermal fibrotic conditions (e.g. keloids or scarting),
cischaemia, strokes, hypertension, heart attacks, atherosclerosis, or
infertility in mammals (e.g. humans, dogs, cats, cattle, horses, sheep,
pigs, goats, or rabbits) The PRO polypeptides are useful as targets for
therapeutic intervention in these diseases, and diagnostic determination
of the presence of these diseases. The PRO polypeptides are also useful
as molecular weight markers, or for chromosome identification. The PRO
censed are useful as hybridisation probes, or for screening libraries of
thuman cDNA, genomic DNA or mRNA. The PRO genes may also be used in gene
therapy, particularly for replacing a defective gene. This sequence
charapy, particularly for replacing a defective gene. This sequence New genes and secreted and transmembrane polypeptides (e.g. PRO245 or PRO335), useful for treating or diagnosing e.g. Alzheimer's disease, cancers, hemorrhage, rheumatoid arthritis, diabetes, cirrhosis, ischemia Claim 2; Fig 73; 482pp; English Williams PM, Wood WI; 2003-370793/35. P-PSDB; ABC01809 or strokes. 

Sequence 2372 BP; 721 A; 524 C; 489 G; 638 T; 0 U; 0 Other;

The invention describes an antibody that specifically binds to a PRO polypeptide having a fully defined amino acid sequence given in the specification. The antibody is useful in identifying PRO polypeptides useful for various industrial applications, including pharmaceuticals, diagnostics, biosensors and bioreactors. The antibody is also used for affinity purification of PRO polypeptides from recombinant cell culture or natural sources. The antibody, PRO polypeptide, or its agonists or antagonists, may be used for preparing a medicament for diagnosing or treating a condition responsive to the antibody, PRO polypeptide, or its agonists. This sequence encodes a novel human secreted and transmembrane PRO polypeptide
                  New antibody useful for identifying PRO polypeptides, for affinity purification of PRO polypeptides, and for preparing a medicament for diagnosing or treating conditions responsive to the antibody or PRO

The invention relates to an antibody that binds to a secreted or transmembrane protein designated PRO1446 appearing as ABO33941. The protein is one of 84 PRO polypeptides which (along with their encoding nucleic acids) are disclosed in the specification. The methods and compositions of the present invention are useful for the preparation of a medicament for the treatment of disorders associated with the aberrant expression or activity of the PRO polypeptide, such as tumour conditions and cancer. They can also be used to generate transgenic or knockout animals useful in the development and screening of therapeutically useful reagents. The PRO polypeptides and encoding nucleic acids can be used as molecular weight markers for protein electrophoresis, chromosome identification and tissue typing. The antibodies may be used in various diagnostic, competitive binding and/or immunoprecipitation assays. The present sequence encodes a PRO polypeptide

The invention describes novel isolated PRO polypeptides. The PRO polypeptides or anti-PRO antibodies are useful in preparing a medicament for treating a condition that is responsive to the PRO polypeptide or antibody. The PRO nucleotide sequences may be used as hybridisation probes in chromosome and gene mapping, or in generating antisense RNA and DNA. PRO nucleotids are also useful in preparing PRO polypeptides, in sasys to identify other proteins or molecules involved in binding reaction, to generate transgenic animals or knockout animals, which in turn are useful in the development and screening of therapeutically useful reagents, for chromosome identification, and tissue typing. The PRO polypeptides and nucleic acid molecules are also useful in gene therapy, and as molecular weight markers for protein electrophoresis therapy, and as molecular weight markers for protein electrophoresis curposes. The anti-PRO antibodies may be used in diagnostic assays for PRO, or for the affinity purification of PRO from recombinant cell

Ferrara N; ME, Goddard A; Kljavin IJ; Tumas D; New PRO polypeptides and nucleic acid molecules, useful in diagnosing or treating inflammatory diseases, organ failure, atherosclerosis, cardiac injury, infertility, cancer, AIDS, Alzheimer's disease or Parkinson's disease

Claim 2; Fig 73; 473pp; English.

The invention relates to an isolated PRO polypeptide having at least 80% amino acid sequences given in the specification (appearing as ABU54347-caid sequences given in the specification (appearing as ABU54347-caid sequences given in the specification (appearing as ABU54347-caid sequences given in the specification); (c) any one of the PRO sequences which careful a sesociated signal peptide; (d) an extracellular domain of the PRO polypeptide with its associated signal peptide; (d) an extracellular domain of the PRO polypeptide which lacks its associated signal peptides. Also include are the nucleic acids encoding the PRO polypeptides and nucleic acids are useful in diagnosing or treating conference. The proposition of the PRO polypeptides and nucleic acids are useful in diagnosing or treating conferences such as squamous cell carcinoma, Alzheimer's disease, Parkinson's disease, amyotrophic lateral sclerosis, inflammatory diseases, e.g. cancers such as squamous cell carcinoma, Alzheimer's disease, premature conferences are also useful for wound repair and associated therapies concerned with re-growth of fissue. The nucleotide sequences may be used as hybridisation probes in chromosome and gene mapping, or in generating antisense RNA and DNA, PRO nucleic acids are also useful in proper and selective and sessociated herapies concerned with re-growth of fissue. The nucleotide sequences may be used as hybridisation probes in chromosome and gene mapping, or in generating antisense RNA and DNA, PRO nucleic acids are also useful for volver roceins or missuely and proper proper and probes in chromosome and gene mapping, or in generating antisense RNA and DNA, PRO nucleic acids are also useful for yother proceins or missuely produced with re-growth of fissue. The nucleotide sequences may be used as shown the proceins or missuely and proceins and gene mapping, or in generating antisense RNA and DNA, properties are also useful for wollypeptides are also useful for yother proceins or missue proceins or missue proceins or mis polypeptides, in assays to identify other proteins or molecules involved in binding reaction, to generate transgenic animals or knockout animals, which in turn are useful in the development and screening of therapeutically useful reagents. therapeutically useful reagents, for chromosome identification, and tissue typing. The PRO polypeptides and nucleic acid molecules are also useful in gene therapy, and as molecular weight markers for protein electrophoresis purposes. The anti-PRO antibodies may be used in diagnostic assays for PRO, or for the affinity purification of PRO from recombinant cell culture or natural sources. The present sequence encodes PRO polypeptide

The invention relates to an isolated PRO polypeptide. PRO317 is useful in disagnosing or treating abnormal bleeding involved in gynecological diseases e.g. to avoid or lessen the need for hysterectomy. PRO317 may also be useful as an agent that affects angiogenesis and PRO317 is useful and PRO317 polypeptides are useful for treating disorders conditions. PRO217 polypeptides are useful for treating disorders associated with the preservation and maintenance of gastrointestinal mucosa and the repair of acute and chronic mucosal lesions, skin diseases associated with abnormal keratinocyte differentiation (e.g. psoriasis). PRO3187 polypeptide is useful for treating Parkinson's disease, and disease, amyotrophic lateral sclerosis (ALS), neuropathies and disease related to uncontrolled cell growth, e.g. cancer. PRO219 polypeptides which serves as tumour specific antigens may be polypeptide which serves as tumour specific antigens may be polypeptide is useful as an antithrombotic agent with reduced risk for haemorhage as compared with heparin. PRO317 polypeptide is useful in the prolypeptide is useful in the maintening endometrial bleeding angiogenesis. PRO289 polypeptides and compared with heparin. PRO317 polypeptide is useful in the prolypeptide as compared with heparin. PRO317 polypeptide is useful in PRO314 polypeptides are useful for treating asthma, rheumatoid arthritis, portion have therapeutic applications in wound healing and tissue repair. PRO284 polypeptides are useful for treating asthma, rheumatoid arthritis, procriasis and multiple sclerosis. The polypeptide and its nucleic acid
   Novel secreted and transmembrane polypeptides and polynucleotides encoding them useful for treating abnormal bleeding involved in gynecological diseases, skin diseases and neurodegenerative diseases.

are useful for tissue typing. PRO antibodies are useful for immunohistochemical staining and/or assay of sample fluids. Anti-PRO antibodies are useful in diagnostic assays for PRO e.g. detecting its expression in specific cells, tissues or serum and for affinity purification of PRO from recombinant cell culture or natural sources. The present sequence represents CDNA encoding a human secreted/transmembrane

The invention relates to an antibody that binds to a polypeptide with a fully defined sequence given in the specification. The methods and compositions (containing antibodies that specifically bind a PRO compositions (containing antibodies that specifically bind a PRO compositions (containing antibodies that specifically bind a PRO colypeptide) of the present invention are useful for the preparation of a medicament for the treatment of disorders associated with the aberrant can can cancer. They can also be used to generate transgenic or knockout animals useful in the development and screening of therapeutically useful reagents. The PRO polypeptides and encoding nucleic acids can be used as molecular weight markers for protein electrophoresis, chromosome identification and tissue typing. The PRO polypeptides are useful to induce angiogenesis e.g wound healing; in the treatment of sports-related joint problems, articular cartilage defects, osteoarthritis or rheumatoid arthritis, diabetes; hyperinaulinaemia and hypoinsulinaemia. The arthritis diabetes; hyperinaulinaemia and hypoinsulinaemia. The immunoprecipitation assays. The present sequence represents a cDNA encoding a PRO polypeptide of the invention Example 4; Page 69-70; 406pp; English.

  The present invention relates to the isolation of novel human PRO polypeptides, and the polynucleotide sequences encoding them. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides and polynucleotides are useful for preparing a medicament useful in the treatment of a condition responsive to anti-PRO antibody. Anti-PRO antibodies are useful in diagnostic assays for PRO, by detecting its expression in specific cells, tissues or serum, and for affinity purification of PRO from recombinant cell culture or natural sources. ACA63986-ACA64069 represent coll culture or natural sources. polypeptides of the invention

The present invention relates to the isolation of novel human PRO polypeptides, and the polynucleotide sequences encoding them. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptide and polynucleotide sequences are useful for the diagnosis, prevention and treatment of rectal, lung, stomach, coscophageal or skin tumours, and/or cancers. The PRO polypeptides are also useful as molecular weight markers. The PRO polynucleotide sequences are useful for chromosome identification, hybridisation probes, and for sereening libraries of human cDNA, genomic DNA or mRNA. They may also be used in gene therapy, particularly for replacing a defective gene. ACA91250-ACA91333 represent cDNA sequences encoding the human PRO polypeptides of the invention
   New isolated, secreted and transmembrane PRO polypeptide, useful for the diagnosis, prevention and treatment of rectal, lung, stomach, esophageal or skin cancers.

The invention relates to an antibody that binds to a secreted and transmembrane PRO polypeptide. The methods and compositions of the present invention are useful for the preparation of a medicament for the treatment of disorders associated with the aberrant expression or activity of the PRO polypeptide, such as tumour conditions and cancer. They can also be used to generate transgenic or knockout animals useful in the development and screening of therapeutically useful reagents. The PRO polypeptides and encoding nucleic acids can be used as molecular weight markers for protein electrophoresis, chromosome identification and tissue typing. The antibodies may be used in various diagnostic, competitive binding and/or imminoprecipitation assays. The present

                                The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO protein and for modulating at least one biological activity of a cell. The PRO polypeptides or polymucleotides are also useful as pharmaceuticals, diagnostics, polymucleotides are also useful as pharmaceuticals, diagnostics, biosensors or bioreactors, for detecting or treating e.g. hyperplasia, endometriosis, cancers (e.g. those involving solid tumours), ischaemia, coronary arterial disease, polycystic kidney disease, chronic or acute arthritis, psoriasis or multiple sclerosis) in mammals. The PRO genes may also be used in gene therapy, particularly for replacing a defective encoding, the primers amplifying and the probes detecting the PRO polynucleotides of the invention

Botstein D, Desnoyers L, Eaton DL, Ferrara N; Fong S, Gao W, Gerber H, Gerritsen ME, Goddard A; Grimaldi JC, Gurney AL, Hillan KJ, Kljavin IJ; (GETH ) GENENTECH INC Ashkenazi A, Filvaroff E, Godowski PJ,

the invertion traters to sixty one nuction actioning from propertides (secreted and transmembrane). The polymucleotide is useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and DNA, and in gene therapy. The polymucleotide may also be used in preparing PRO competitions by recombinant techniques, and in generating either competitions by recombinant techniques, and in generating properties by recombinant techniques, and in generating either competition of the antibody is used in preparing a medicament for polymeptide or the antibody is used in preparing a medicament for competing a condition responsive to the polymeptide or antibody, such as mucosal lesions e.g. ulcers and enterocolitis, skin disease e.g. psoriasis, cancer e.g. lung cancer and colon cancer, nerve cell disease constraints at disease and Parkinson's disease, Usher syndrome, atrophia areata, angiogenesis, inflammatory disease e.g asthma and crhemmatoid arthritis, ischaemia, and in various disease e.g asthma and crhemmatoid arthritis, ischaemia, and in various disease e.g asthma and crhemmatoid extremesents an CDNA which encodes a PRO polypeptide Sixty one isolated nucleic acids encoding a PRO polypeptide, e.g. PRO245 or PRO1868, useful in chromosome and gene mapping, in generating antisense RNA and DNA, and in treating cancer and Alzheimer's disease. Ä invention relates to sixty one nucleic acids encoding PRO Sequence 2372 BP; 721 A; 524 C; 489 G; 638 T; 0 U; 0 Other; Tumas Stewart TA, Roy MA, Example 33; Fig 73; 481pp; English NF, Paoni Pan J, Pā Wood WI; WPI; 2003-331485/31. The invention relates to a new isolated PRO994 polypeptide comprises an amino acid sequence appearing as ABU92499, PRO994 lacking its associated signal peptide, the extracellular domain of PRO994, the extracellular domain of PRO994, the extracellular domain of PRO994, the extracellular contains of the contains of the children in a secondary of the contains of the contains and coded by the full-length coding sequence of the cDNA ATCC 203018. Also included is a chimaeric molecule comprising the PRO999 polypeptide fused to a heterologous amino acid sequence. The PRO polypeptide is useful in parmaceuticals, diagnostics, biosensors or bioreactors. It is particularly useful for detecting tumours (e.g. lung tumour, colon tumour, breast tumour, prostate tumour, rectal tumour, or liver tumour) in a mammal, for stimulating the release of tumour necrosis factor (TNF) alpha from human blood, for stimulating the proliferation of pericyte cells, or stimulating the release of proteoglycans from cartilage. The polypeptide may be employed for a variety of therapeutic purposes, e.g. for treating cancer, wound healing, cartilage defects, osteoarthritis, rheumatoid arthritis. Also disclosed are the cDNA encoding PRO994, 83 other PRO polypeptides and their encoding cDNAs. The present sequence
   New PRO994 polypeptide, useful for detecting tumors, or for stimulating Tumor Necrosis Factor alpha, or pericyte proliferation, especially for treating cancer, cartilage defects, osteoarthritis and rheumatoid arthritis in mammal.

Novel secreted and transmembrane polypeptide for modulating biological activity of cell expressing the polypeptide, identifying agonists or antagonists of polypeptide, and as molecular weight markers.

Claim 2; Fig 73; 469pp; English.

The invention relates to an isolated, secreted and transmembrane polypeptide, termed PRO polypeptide. The polypeptide is useful for dentifying agonists or antagonists of the polypeptide, for proparing variants of the polypeptide, as molecular weight markers for proteins variants of the polypeptide, as molecular weight markers for proteins or electrophoresis purpose and the nucleic acid is useful for recombinantly expressing those markers. The polypeptide is also useful as therapeutic agent. PRO is useful in assays to identify other proteins or molecules involved in binding interaction. The nucleic acid is useful as therapeutic agent. PRO is useful in the preparation of RRO polypeptide, for generating transgenic animals or knockout animals which in turn are useful in the development and screening of therapeutically useful cangents, to construct hybridisation probes for mapping the gene which encodes the PRO and for the generic analysis of individuals with genetic marker, and for generating probes for polymerase chair reaction (PCR), Northern analysis, Southern analysis and Western analysis. PRO antibody is useful in diagnostic assays for PRO, e.g. detecting its expression in specific cells, tissues or serum and for affinity purification of PRO in specific cells,

| 8 × 8 8 8 8 8 8 8 8 8 8 8 8 8 8 8 8 8 8                       | from recombi<br>antibody is<br>conditions we<br>antibody e- g<br>tissue typin<br>or hypo- or<br>inhibiting tresponse, for<br>treating hea<br>disorders su<br>represents or<br>polypeptide | from recombinant cell culture or natural sources. The polypeptide or its antibody is useful for the preparation of medicament for treating conditions which is responsive to the PRO polypeptide or anti-PRO antibody e.g. tumour. The polypeptide and the nucleic acid is useful for tissue typing. The polypeptide is useful for treating obesity, diabetes to hypo- or hyper-insulinaemia and cardiac insufficiency disorders, for inhibiting tumour growth, enhances vascular permeability and immune response, for inducing reseneration of auditory hair cells and for treating hearing loss in mammals and for treating bone and/or cartilage disorders such as sports injuries and arthritis. The present sequence represents cDNA encoding a human secreted and transmembrane PRO sequence 2372 BP; 721 A; 524 C; 489 G; 638 T; 0 U; 0 Other; |

GluPhelleValSerAspSerThrTyrSerValAlaSerProTyrSerThrIleProAla 180
  The invention relates to an antibody that binds to a secreted and transmembrane polypeptide, PRO1136. The antibody is useful for preparing an endedicament useful in the treatment of a condition responsive to anti-PRO antibody. The antibody is also useful in diagnostic assays for PRO, by detecting its expression in specific cells, tissues or serum, and for affinity purification of PRO from recombinant cell culture or natural sources. The present sequence represents a cDNA encoding a PRO polypeptide of the invention
  New monoclonal antibody that binds to a secreted and transmembrane polypeptide, useful for detecting and purifying the polypeptide and also for treating conditions responsive to the antibody.

The invention describes an isolated polypeptide having at least 80, 85, 95 or 99% identity with: (a) a sequence having 46-335 amino acids, or its extracellular domain; (b) a sequence having 46-335 amino acids, lacking its associated signal peptide; or (c) an amino acid sequence encoded by the full-length coding sequence of the cDNA (ATCC accession number 2095s6). The PRO (secreted and transmembrane) polypeptide is useful for preparing a medicament for treating a condition associated with PRO polypeptide. This sequence encodes a novel human secreted and transmembrane PRO polypeptide

preparing a medicament for treating a condition, e.g. cancer, responsive to the antibody, and in diagnostic and purification assays for the PRO New antibody that specifically binds to a PRO polypeptide, useful in polypeptide

Disclosure, Fig 5; 236pp; English.

The invention describes an antibody that binds to a polypeptide having a sequence of 277 amino acids fully defined in the specification. The antibody, PRO polypeptide, or the agonist or antagonist of the collipseptide, is useful in preparing a medicament for treating a condition responsive to the PRO polypeptide, agonist or antagonist, or the antibody, such as cancer. The antibody may also be used in diagnostic assays for PRO polypeptide in specific cells, tissue or serum, and in affinity purification of the polypeptide. The nucleic acid molecule is useful in molecular biology, as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and DNA, in preparing PRO colypeptide by recombinant techniques, and in gene therapy. The oligonucleotide probes are useful for isolating genomic and cDNA nucleotide sequences or as antisense probes. The secreted proteins are useful in industrial applications, including as pharmaceuticals, diagnostics, blosensors and bloreactors. The PRO polypeptides may also be employed as molecular weight markers for protein electrophoresis PRO polypeptide

   The invention describes an isolated polypeptide comprising 80 % amino acid sequence identity with: (a) a sequence comprising 556 amino acids, given in the specification, or its extracellular domain, with or without its associated signal peptide; or (b) a sequence of a polypeptide encoded by a full-length coding sequence of the cDNA deposited under American Type Culture Collection (ATCC) accession number 209902. The new PRO polypeptide or the nucleic acid encoding the PRO polypeptide is useful in gene therapy, for chromosome identification or for tissue typing. This sequence encodes a novel human secreted and transmembrane PRO polypeptide

  The invention describes an antibody that binds to a novel human secreted and transmembrane PRO polypeptide. The antibody is useful in preparing a medicament for treating a condition e.g. cancer. The antibody may also be used in diagnostic assays for PRO polypeptide in specific cells, tissue or serum, and in affinity purification of the polypeptide. This sequence encodes a novel human secreted and transmembrane PRO polypeptide

The invention describes sixty one nucleic acids encoding PRO polypeptides (secreted and transmembrane). The PRO polypeptides and nucleic acids are useful in diagnosing or treating enterocolitis, gastrointestinal culceration, skin diseases associated with abnormal keratinocyte ulceration, skin diseases associated with abnormal keratinocyte differentiation, e.g. psoriasis or epithalial cancers such as squamous cell carcinoma, Alzheimer's disease, e.g. rheumatoid arthritis, cathma or multiple sclerosis, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, ALDS, cancer, diabetic complications, or mutations in general. The polypeptides are also useful for wound repair and associated therapies concerned with region useful in gene therapy, and as molecular weight markers for protein electrophoresis purposes. The anti-PRO antibodies may be used in diagnostic assays for PRO, or for the affinity purification of PRO from recombinant cell culture or natural sources. This sequence encodes a convertible control of the protein accombinant cell culture or natural sources. This sequence encodes a 280 ATCACCCTTGTGAGAGAGAAAAAGGCGAACCAGCAGAATTTCACAGAAGCTAAGGAGGGC 339 160 ATGGCCAGGTGCTTCAGCCTGGTTGCTTCTCACTTCCATCTGGACCACGAGGCTCCTG 1 MetAlaArgCysPheSerLeuValLeuLeuThrSerIleTrpThrArgLeuLeu 220 GICCAAGGCICTIIGCGIGCAGAAGAGCIIICCAICCAGGIGICAIGCAGAAIIAIGGGG 41 IleThrLeuValSerLysLysAlaAsnGlnGlnLeuAsnPheThrGluAlaLysGluAla ValGlnGlySerLeuArgAlaGluGluLeuSerIleGlnValSerCysArgIleMetGly Sequence 2372 BP; 721 A; 524 C; 489 G; 638 T; 0 U; 0 Other; 2372 322 0 0 0 Length:

The present invention relates to the isolation of novel human PRO polypeptides, and the polypucleotide sequences encoding them. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides and polynucleotides are useful for preparing a medicament useful in the treatment of a condition responsive to anti-PRO antibodies are useful in diagnostic assays for PRO, by detecting its expression in specific cells, tissues or serum, and for affinity purification of PRO from recombinant cell culture or natural sources. ACA63373-ACA63456 represent cDNA sequences encoding the human PRO polypeptides of the invention

Novel secreted and transmembrane polypeptides and polynucleotides encoding them useful for treating abnormal bleeding involved in gynecological diseases, skin diseases and neurodegenerative diseases

Claim 2; Fig 73; 467pp; English.

polypeptide. The PRO polypeptides are useful for modulating biological activity of a cell, in diagnosing or treating abnormal bleeding involved in gynaecological diseases e.g. to avoid or lessen the need for thysterectomy, for treating anglogenesis, tumour, coronary ischaemic or hysterectomy, for treating anglogenesis, tumour, coronary ischaemic condition, disorders associated with the preservation and maintenance of gastrointestinal mucosa and the repair of acute and chronic mucosal lesions, skin diseases associated with abnormal keratinocyte differentiation (e.g. psoriasis), Parkinson's disease, Alzheimer's differentiation (e.g. psoriasis), Parkinson's disease, Alzheimer's cascade disorders, neurodegenerative disease, thrombosis, haemorrhage, endometrial bleeding, wound healing, tissue repair, asthma, rheumatoid arthritis, multiple sclerosis. Nucleic acid encoding PRO polypeptides are useful in molecular biology including uses as hybridisation probes and includes are useful in molecular animals or knockout animals. The PRO antibodies are useful for tissue typing. PRO antibodies are useful in diagnostic assays for sample fluids. Anti-PRO antibodies are useful in diagnostic assays for sample fluids. Anti-PRO antibodies are useful in diagnostic assays for sources. The present sequence represents conding a human secreted condinity purification of PRO from recombinant cell culture or natural sources. The present sequence represents conding a human secreted and transmembrane PRO polypeptide invention relates to an isolated secreted and transmembrane PRO

Novel isolated native PRO polypeptide useful for treating Parkinson's disease, enterocolitis, Zollinger-Ellison syndrome gastrointestinal ulceration, Alzheimer's disease, amyotrophic lateral sclerosis, Usher syndrome.

## Claim 2; Fig 73; 469pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO polypeptide, for linking a at least one biological activity of a cell. PRO polypeptides are useful for detecting other PRO polypeptides in a sample and for linking a bioactive molecule to a cell expressing a PRO polypeptide. The PRO polypeptide antibodies are useful for modulating the biological activity of a cell expressing PRO polypeptides. PRO polypeptides are also useful for treating disorders associated with the preservation and maintenance of gastrointestinal mucosa and the repair of acute and chronic mucosal lesions, skin diseases associated with abnormal keratinocyte

diseases, amyotrophic lateral sclerosis (ALS), neuropathies and additionally, disease related to uncontrolled cell growth, e.g. cancer. PRO polypeptides also serves as tumour specific antigens which may be exploited as therapeutic targets for anti-tumour drugs, and are also employed therapeutic targets for anti-tumour drugs, and are also comployed therapeutically in vivo for lessening the effects of viral infection. The PRO polypeptides can be also used in assays to determine if it has a role in neurodegenerative diseases or their reversal, as an antithrombotic agent with reduced risk for haemorrhage as compared with hepatin, in treating other PRO associated disorders, in modulating concentrial bleeding angiogenesis, and may also have an effect on kidney tissue. PRO polypeptides and their portions affect the expression of tissue. PRO polypeptides and their portions affect the expression of concentrial bloody including uses as hybridisation probes for cDNA library to isolate the full-length PRO cDNA or to isolate other cDNAs, in concentrial proparing PRO polypeptides, for generation of antisense RNA and DNA, for preparing PRO polypeptides, for generation of antisense RNA and DNA, concentrial and gene mapping, in the generation of antisense RNA and DNA, concentrial and generation and for chromosome and for the generation of antisense RNA and DNA, concentrial as molecular marker for protein electrophoresis purposes, as therapeutic agents, for screening compounds to identify those that mimic the PRO polypeptide (antagonists) or prevent the effect of the PRO consequent concentrial and concentrial controlled and concentrial and concentrate recombinant cell culture or natural sources. The PRO genes may also be used in gene therapy, particularly for replacing a defective gene. The sequence presented is a gene encoding a PRO polynucleotide of the

   This invention relates to a novel isolated and secreted PRO polypeptide. PRO is a transmembrane protein involved in the formation, differentiation and maintenance of multicellular organisms, and more particularly the proliferation, differentiation and migration of individual cells. The invention describes screening compounds to identify PRO polypeptide agonists and antagonists, anti-PRO antibodies, and immunocollugates comprishing an antibody conjugated to a cyctotoxic agent. Specifically, the hetrologous protein of the chimeric polypeptide is an epicope tag or an PC region of an immunoglobulin. Through the use of gene therapy, the PRO polypeptide is useful for preparing cytostatic compositions for diagnosing or treating cancer. The polypeptide is also useful as a molecular weight marker for protein electrophoresis purposes. This polypeptide, found in the CDNA library of the invention.
  40
   New secreted and transmembrane PRO polypeptide, useful for preparing a composition for diagnosing or treating cancer and as a molecular weight marker.

   The invention relates to an antibody that binds to a fully defined PRO polypeptide. The antibody is useful for the diagnosis, prevention and/or treatment of disorders associated with the aberrant expression or activity of the PRO polypeptide, such as tumour conditions and cancer. They can also be used to generate transgenic or knockout animals useful in the development and screening of therapeutically useful reagents. The PRO polypeptides and encoding nucleic acids can be used as molecular weight markers for procein electrophoresis, chromosome identification and tissue typing. The antibodies may be used in various diagnostic,

New secreted and transmembrane polypeptides useful for treating skin, neurodegenerative diseases, asthma, rheumatoid arthritis, psoriasis and multiple sclerosis.

Claim 2; SEQ ID NO 200; 471pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise anthodies that specifically bind to the PRO polypeptides can be used to raise bloadtive molecule to a cell expressing a PRO protypeptides are useful for detecting other properties in a sample and for inking a bloadtive molecule to a cell expressing a PRO polypeptides are useful for detecting other properties are useful for adulating the biological activity of a cell. PRO polypeptides are useful for adulating the biological activity of a cell expressing a PRO polypeptides are also useful for adulating the biological activity of a cell expressing a PRO polypeptides are also useful contracting diseases associated with abnormal keratinocyte (of a cell expressing) pRO polypeptides. PRO polypeptides are also useful diseases associated with abnormal keratinocyte (of gastrointestinal mucosa and the repair of acute and chronic mucosal diseases, amyorrophic lateral sclerosis (ALS), neuropathies and activated propertied as therapeutic targets for anti-tumour furuge, and are also employed therapeutically in vivo for lessening the effects of viral camployed therapeutically in vivo for lessening the effects of viral inferential breating other PRO polypeptides can be also used in assays to determine if it has a role in meurodegenerative diseases or their reversal, as an antitation disease and their portions affect the expression of employed therapeutically in vivo for lessening the effects of viral endometrial bleeding angiogenerative diseases or their reversal, as an antitation may be a role in appotosis. The polymodiceries are useful in concome and gene mapping, in the generating transpent canhais with genetic disorders as which have a role in appotosis. The polymodice the expression of the propertied and for chromosome identification. The processing cherapeutically useful reagents, as probes and for the general parts, as probes and for the general parts of individuals with genet

The invention relates to an isolated nucleic acid molecule comprising a sequence with at least 80% identity to: (a) a nuclectide encoding any of (a) FRO (secreted and transmembrane protein) polypeptides appearing as AB032756-AB032816, or (b) any of 61 nucleotide sequences having 50-4053bp (c) AB032756-AB032816, or (b) any of 61 nucleotide sequences having 50-4053bp (c) any these 61 nucleotide sequences. Also included are the isolated PRO oplypeptide (lacking its associated signal peptide or an extracellular domain of the PRO polypeptide, with or lacking its associated signal peptide or an extracellular comprising the vector comprising the nucleic acid molecule, a host cell peptide), a vector comprising the nucleic acid molecule, a host cell comprising the vector (used to produce the PRO polypeptide), a chimaeric acid molecule comprising the PRO polypeptide fused to a heterologous amino acid sequence, an anti-PRO antibody, detecting PRO245 or PRO1868 polypeptide and modulating any of these PRO polypeptide in a sample suspected of containing any of these PRO polypeptide in a sample suspected of containing any of these PRO polypeptides are useful as pharmaceuticals, diagnostics, biosensors or polynucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. These are particularly useful for diagnostics, atheroselerosis, infertility, birth defects, premature aging, malignancy (e.g. inflammations, rheumatoid arthritis, psoriasis, multiple sclerosis, atheroselerosis, infertility, birth defects, premature aging, malignancy (e.g. cancers), strokes, heart attacks, hypertension, gastrointestinal ulerations, Parkinson's disease, Alzheimer's disease, or AIDS in mammals. These are also useful for modulating cholesterol uptake in the bolecular weight markers, or for chromosome identification. The PRO genes are useful as hybridisation probes, or for sercening libraries of human colls, generally, particularly for replacing a defective gene. The present the present the present is a cDNA Claim 2; Fig 73; 476pp; English.

and transmembrane proteins. Extracellular proteins play imment for second and transmembrane proteins. Extracellular proteins play important roles in the formation, differentiation and maintenance of multicellular corganisms. The fate of many individual cells (for example proliferation, migration or adifferentiation) is typically governed by information or received from other cells and the immediate environment. The information of received from transmitted by secreted polypeptides (for example mitogenic factors, survival factors, cytotoxic factors, differentiation factors, cell receptors or membrane bound proteins. These membrane bound proteins can receptors may be of use as pharmaceutical and diagnostic agents, such as in the blocking of receptor-ligand interactions. The current invention corrections of the invention may have cytostatic activities through the proteins of the invention may have cytostatic activities through the cytomical process of medicanent for challenging or treating as tumour in a mammal. In addition, they may be useful for measuring or the properties of the invention of the invention of a medicament for diagnosing or treating as tumour in a mammal. In addition, they may be useful for measuring or the properties of the invention of a medicament for diagnosing or treating or treating the expression of a tumour associated gene. The present
   This invention relates to novel nucleic acids encoding human PRO secreted
  New isolated PRO polypeptide, useful in the preparation of a medicament for treating a condition responsive to PRO polypeptide, as therapeutic agent e.g. vaccine, and as molecular weight marker.
   sequence is a cDNA sequence which encodes a human PRO protein of the invention.

PRO is a transmembrane protein involved in the formation, differentiation and maintenance of multicellular organisms, and more particularly the proliferation, differentiation and migration of individual cells. The invention describes screening compounds to identify PRO polypeptide agonists and antagonists, anti-PRO antibodies, and immunoconjugates comprising an antibody conjugated to a cytotoxic agent. Specifically, the heterologous protein of the chimeric polypeptide is an epitope tag or an PC region of an immunoglobulin. Through the use of gene therapy, the PRO polypeptide is useful for preparing cytostatic compositions for diagnosing or treating cancer. The polypeptide is also useful as a molecular weight marker for protein electrophoresis purposes. This polypuclectide sequence is a native CDNA clone that encodes human PRO

The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polymucleotides encoding them. The PRO polypeptides and polymucleotides can be used in diagnosing or treating abnormal bleeding involved in gynaecological diseases e.g. to avoid or lessen the need for hysterectomy. They can also be used in treating coronary ischaemic conditions, disorders associated with the preservation and maintenance of gastrointestinal aucosa and the repair of acute and chronic mucosal lesions, skin diseases associated with abnormal keratinocyte differentiation (e.g. psoriasis), Parkinson's disease, asthma, rheumatoid arthritis, multiple sclerosis, amyotrophic lateral sclerosis (ALS), neuropathies and diseases related to uncontrolled cell growth, such as cancer. This sequence represents a human PRO polynucleotide of the invention
  Novel secreted and transmembrane PRO polypeptides and polynucleotides encoding them, useful for treating abnormal bleeding involved in gynecological diseases, skin diseases and neurodegenerative diseases.

New genes encoding for secreted and transmembrane PRO polypeptides, useful for treating e.g. cardiac insufficiency disorders, wounds, cancers, obesity, diabetes, hyperinsulinemia, hypoinsulinemia, or arthritis.

# Claim 2; SEQ ID NO 200; 476pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides and the mucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO protypeptide, for linking a tleast one biological activity of a cell. PRO polypeptides are useful for detecting other PRO polypeptides and for inking a bioactive molecule to a cell expressing a PRO polypeptide. The PRO polypeptide antibodies are useful for modulating the biological activity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
of a cell expressing PRO polypeptides. The PRO polypeptides or polynucleorides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. These are useful for stimulating hypertrophy of neonatal conflictions are useful for stimulating hypertrophy of neonatal provideration of endothelial cells, modulating the proliferation of catimulated T-lymphocytes, enhancing the survival or proliferation of catimulated T-lymphocytes, enhancing the survival or proliferation of cells, inducing proliferation and/or receivable metation of chondrocytes. In particular, these are useful for cells, modulating glucose or FRA uptake, inducing proliferation and/or redifferentiation of chondrocytes. In particular, these are useful for detecting or treating cardiac insufficiency disorders, wounds, cancerous tumours, retinal disorders or injuries (e.g. loss of sight due to arthritis pigmentosum), obesity, diabetes, hyperinsulinaemia, or bone or cartilage disorders, wounds, cancerous crethritis) in mammals. PRO polypeptides and their portions affect the arthritis in mammals. PRO polypeptides and their portions affect the expression of genes which have a role in cell death. The polynucleotides are useful in molecular biology including uses as hybridisation probes of or cDNA library to isolate the full-length RRO polypeptides, for generating transgenic and DNA, for preparing PRO polypeptides, for generating transgenic and DNA, for preparing PRO polypeptides, for generating transgenic genetic analysis of individuals with genetic disorders as well as for recombinantly expressing the protein and for chromosome identification. The proteins are useful as molecular marker for protein the effect of the PRO polypeptide (arpagonists). The polymucleotides are useful as molecular marker for protein and proteins are useful as molecular marker for protein securing compounds to identify the RRO polypeptide (arpagonists). The polymucleotides are useful in disquagitic assays for PRO es geneting and protein and protein and protein and protein and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     100
